

Response to Reviewers – CDIO 2026 (Paper ID 118)

Summary

Thank you for the constructive feedback. Revisions focus on improving clarity (frameworks, terminology), strengthening explanation of assessment mechanisms, and making evaluation perspectives and industry engagement more explicit, while maintaining the design-oriented scope.

Reviewer 1

1. Clarify LOUIS framework

Response (addressed): LOUIS (Learning Outcomes in University for Impact on Society) is now expanded and its role clarified. The text explains how it supports operationalizing competence, prioritizing key domains, and aligning outcomes, activities, and assessment.

2. Improve pedagogical flow and acronym clarity

Response (addressed): Figure 1 has been moved to the Pedagogical mechanisms section to support the explanation of course structure. Acronyms (iRAT, tRAT, tAPP, IREF) are now introduced earlier and explained briefly for TBL-novices.

3. Provide rubric example

Response: Due to space constraints, a full rubric is not included. Instead, the manuscript references Ingimundardóttir (2026), which details rubric design and application in PR-based assessment.

4. Elaborate industry feedback and analysis

Response (addressed): The manuscript now clarifies that industry feedback was gathered through discussions of intermediate results and final presentations, informed expectations across iterations, and was interpreted in terms of professional competence (justification, transparency, credibility of results).

Reviewer 2

1. Clarify “credibility and trust”

Response (addressed): These are now explicitly framed as industry expectations and linked to evaluation through reproducibility, transparency, and justification of analytical choices.

2. Explain “accumulated feedback”

Response (addressed): Clarified as a structured carry-forward mechanism (not just repeated feedback), supported by:

- reuse of rubrics across modules,
- explicit revisiting of prior feedback,
- and traceability via version control and PRs.

3. Report class size and structure

Response (addressed): Course size (10–15 students) and team structure (two teams) are now explicitly stated.

4. Compare evaluation perspectives

Response (partially addressed):

The results section has been revised to more clearly distinguish between student, graduate, industry, and academic perspectives where possible. Due to space constraints, this distinction remains concise rather than fully elaborated.

5. Define “authentic assessment”

Response (addressed): A reference to Wiggins (1998) has been added, linking authentic assessment to realistic tasks, explicit criteria, and improvement-oriented feedback.

6. Formatting issues

Response (addressed): Formatting follows the CDIO LaTeX class defaults; citation style has been made consistent using \textcite and \parencite.

Reviewer 3

Response: Thank you for the positive evaluation. No changes were required.

Final remarks

Revisions improve clarity, transparency, and alignment with CDIO expectations while preserving the paper's core contribution as a design-oriented case.
